

**ABSTRACT OF THE DISCLOSURE**

A protective barrier arrangement to be placed between the pot for a plant and the supporting surface which is made of a number of slat-like support members readily assemblable and disassemblable; each slat-like member thereby includes a number of pegs along one side and located in one-half of the slat-like member with respect to the transverse center plane, a similar number of holes extending inwardly from the other side of the slat-like member in alignment with said pegs and a further similar number of holes on the one side of the slat-like member arranged in the opposite half of the slat-like member symmetrically with respect to the center transverse plane of a slat-like member. The top surface of each slat-like member may also be provided with a moisture-retaining channel.
